SUBJECT INDEX

Acetamide 201
Acetanilide 201
Aluminium–copper alloys 77, 141
Aluminium oxide 345
Apparatus for growth of thin films
– by epitaxy of gallium indium phosphide 243
Apparatus for melt growth
— by Czochralski method
— — pressure pulling 225
— by floating zone method
— — of nickel 151
— by uniaxial solidification method
— — of tin antimony alloys 29, 39
Apparatus for miscellaneous purposes
— low frequency induction heating 50
Apparatus for solution growth
— at low temperature
— — of TGS 329

Barite 166
Barium sulphate 166
Bismuth germanate 348
Bismuth–lead bismuthite eutectic 121

Cadmium iodide 177
Cadmium sulphide 255
Cadmium telluride 189
Calcium hexaboride 110
Cellular growth
— of acetanilide 189
— of aluminium–copper alloy 77
— of alluminium–copper aluminide 141
— of cyclodecane 1
— of ice 73
— of strontium sulphate 166
— of zinc sulphide 68
Chrysene 355
Cinnabar 225
Coiled crystals of gallium arsenide 351
Cyclodecane 1

Etching
— chemical, of silver 92
— of sodium chloride 171
Eulytine 348
Eutectic growth
— of aluminium–copper–aluminide eutectic 141
— of bismut–lead bismuth alloy 121

Facet growth from the melt 293
Fluoroapatite 97

Gadolinium hexaboride 110
Gallium arsenide 11, 101, 157, 351
Glass-crystallization 95

Hemispherical crystals of cadmium telluride 191

Ice 53, 73, 201, 260
Interface of solid–liquid, kinetics 265

Kinetics
— of aluminium–copper alloys 77
— of geld-free energy 221
— of ice 260
— of ice-free energy 260
— of interface solid–liquid 265
— of iron–nickel alloy 197
— of tin–antimony alloys 29, 39
Kinetics of growth
— during facet formation 293
— of epitaxial silicon 6
— of GaAs whiskers 11
— of iron–nickel whiskers 197
— of nucleation 233
— of salol 25, 313, 323
— of silicon carbide whiskers 297
— of TGS 329

Lead sulphide 166, 255, 336

Magnesium 273
Manganese arsenide 218
Melt growth
— by Bridgman method
— — of magnesium 273
— — of rubidium manganese chloride 99
— by Czochralski method
— — calculation of pressure pulling 225
— — of fluoropatite doped with Cr^{3+} or Ho^{3+}
— — of yttrium boride 185
— — of YAG:$Nd^{3+}Lu^{3+}$ 310
— by floating zone method
— — of nickel alloys 151
— by uniaxial solidification
— — of aluminium–copper 141, 77
— — of aluminium–oxide 345

— — of cyclodecane 1
— — of ice 53
— — of salol 25, 313, 323
— by zone melting
— — of chrysene 355
— — of manganese arsenide 218
— — facet formation during –, theory of 293
Mercuric selenide 21
Mercuric sulphide 21, 255
Mercuric telluride 21
Morphological stability
— of doped organic crystals 1
— of ice 53
— theory of 53, 265
Morphology of
— crystals of PbS 336
— films of nickel 183

Nucleation
— of ice 201
— of nickel 151
— of nickel–cobalt alloys 151
— of quartz from glass 95
— of silicon carbide 297
— theory of 201, 233

Perfection of crystals
— of cadmium telluride 191
— of cyclodecane 1
— of gallium arsenide films 157
— of magnesium 273
— of nickel films 182
— of silicon carbide whiskers 297
— of silicon films 131
— of silver 92
— of TGS 329
— of zinc 283
— of zinc oxide 105
Polytypes of
— cadmium iodide 177
— silicon carbide 147

Quartz 95

Rubidium manganese chloride 99

Silicon 6, 131
Silicon carbide 147, 297
Silver 92
Sodium chloride 171
Solution growth
— by flux method
— — of barium sulphate 166
— — of lead sulphate 166
— — of mercuric chalcogenides 21
— — of strontium sulphate 166
— — of vanadium oxide 280
— by gel method
— — of cadmium sulphide 255
— — of lead sulphide 255
— — of mercuric sulphide 255
— — by hydrothermal method
— — of lead sulphide 336
— by low temperature growth
— — of TGS 329
Spherical crystals of magnesium 273
Steady state rejection of impurities 25
Strontium sulphate 166
Surface free energy 221, 260

TGS 329
Thermodynamic data
— for mercuric chalcogenides 21
Thin films
— by liquid film epitaxy
— — capillary film for 101
— — of gallium arsenide 101, 157
— — of gallium indium antimonide 336
— — of gallium phosphide 101
— by vapor phase epitaxy
— — through chemical vapor deposition (CVD)
— — — of doped gallium arsenide 113
— — — of gallium indium phosphide 243
— — — of silicon in horizontal reactors 6
— — — in vertical reactors 131
— — — theory of – 6
— — — thermodynamics of – 113
— — through evaporation and condensation sublimation
— — — of nickel 182
— — — of tungsten 249
— — — of zirconium 249
Tin–antimony alloys 29
Tungsten 249

Uranyl nitrate 201
Vanadium oxide 280
Vapor growth
— by chemical transport
— — of gallium arsenide 6
— — of iron nickel alloys 197
— — of zinc oxide 105
— by evaporation and condensation sublimation
— — of cadmium telluride 191
— — of magnesium 273
— — of zinc 283
— — of zinc sulphide 68
Vaporization mechanisms of vapor–liquid–solid growth (VLS)
— of calcium hexaboride 110
— of gadolinium hexaboride 110
— of gallium arsenide 6, 351
— of silicon carbide 297
— of zinc sulphide 351

Whisker growth
— of calcium hexaboride 110
— of gadolinium hexaboride 110
— of gallium arsenide 6, 351
— of iron nickel alloys 197
— of silicon carbide 297

YAG:$Nd^{3+}Lu^{3+}$ 310
Yttrium boride 185

Zinc 283
Zinc oxide 105
Zinc sulphide 68, 351
Zirrconium 249
